System Overview

DHI-HY-1410C Addressable Input / Output Module is a mated product of the Addressable Fire Alarm Control Panel, regulating the normal operation of external fire protection device. It can realize an output control for fire linkage equipment and receive the feedback signals of the fire linkage equipment to monitor the normal operation of the fire linkage equipment. It can be connected with fire dampers, smoke exhaust vents, air supply vents, 24V shunt auxiliary release and other fire-fighting equipment that can be activated by pulse control.

Functions

Input detection

Monitor status of passive, normally open on-off pieces of equipment, i.e., fire damper, flow indicator, pressure switch, and signal valves.

Fast response

When there is a fire alarm, the signal is sent to the control panel within 1 second.

Output control

Active output port, 24V/2A/25ms pulse output.

Input check mode

Input check mode is available. Enable Input Check Mode by default.

Output check mode

Output check mode is available. Enable Output Check Mode by default.

Scene

It is suitable for places with automatic fire alarm systems, fire emergency broadcasting systems, and background music systems, such as shopping malls, hotels, schools, factories and other civil or industrial buildings.
