DeepHub Meeting

■ Introduction

DeepHub Meeting is a feature-rich video conferencing software that comes with an interactive collaborative whiteboard application embedded in it. It not only contains essential video conferencing functions, such as video talk and voice talk, but also provides various ways for individuals to attend meetings through its powerful whiteboard application. This unique software greatly enhances the convenience, efficiency, and comprehensiveness of online meetings.

■ Features

- **1080p High-Definition Meeting:** Supports performing video calls and presentations in 720p to 1080p resolution. The resolution is 720p by default.
- **300 Attendees Online:** Supports having 50, 100, or 300 attendees in a meeting depending on the permission.
- **Home Page Takeover:** The home page can be set as the meeting page to quickly attend meetings and view meeting records.
- **Interactive Whiteboard:** Meetings can only be initiated directly from the whiteboard device. Individuals that have permission to access the whiteboard software on the interactive whiteboard, can initiate meetings and open the whiteboard software directly on the whiteboard. Take your inspiration and mold it into concrete ideas with brushes, notes, images, documents and hyperlinks. Freely select from a variety of rich templates to suit your scene, as you bring your creativity to the whiteboard. You can also organize brainstorm to engage in fruitful discussions. Save your documents and projects to the storage card, and conveniently manage them through the Kanban. You can also complete the creative process, from inspiration to creation, on one canvas while saving and managing your information. Choose from a variety of styles, graphics and visuals with your team during meetings and online collaborations, to make communication easier and more interactive for members to provide their feedback and reach agreements. Team members can share information on their schedules at any time through the software. Interactive presentation mode and many other collaborative and interactive tools can also be used by presenters and meeting attendees to express their ideas with greater clarity and creativity. AI assistant will offer a seamless and high-efficient meeting experience to you.
- **Access from Multiple Platforms:** After a meeting is initiated on the smart interactive whiteboard, attendees can click the meeting button on the desktop client or web browser in their computer to attend the meeting. They can also access the meeting through the web browser on their mobile device.
- **Cloud Recording:** The hosts of meetings can initiate cloud recording and view the content of their meetings online.
- **Point-to-Point Call:** The interactive whiteboard can join a meeting and call other whiteboards to also join the meeting based on their meeting numbers.

■ Functions

Before Meeting	Account Management	Meetings can only be initiated directly from the interactive whiteboard. After the activation code is used to activate the interactive whiteboard, individuals that have permission to access the whiteboard software can initiate meetings and open the software directly on the interactive whiteboard.
	Flexible Meetings	Meetings can be attended from the computer through the Windows desktop client or web client, or from the mobile client on a mobile device. The WEB H5 scope of adaptation is as follow: Safari version 15 and above is supported for iOS and Chrome version 101 and above is supported for Android.
	Meeting Configuration	Meetings can be easily created, joined, scheduled and canceled.

During Meeting	General Settings	You can adjust the volume of the speaker and switch between the camera, microphone and other modules on the interactive whiteboard.
	Attendee Management	The host can control live videos, view attendee information, rename and change the identity of attendees, control their speaking permissions, and remove attendees from the meeting. The host also has the highest level of permission in the meeting.
	Screen Sharing	The home screen of the interactive whiteboard can be shared in meetings. It not only supports screen sharing, but also combines together screen sharing with video conferencing.
	Meeting Recording	Meetings can be recorded through cloud recording. A PIN code can also be added to the video for protection, as it would require users to enter the PIN code to view the recording online.
	Interactive and Collaborative Whiteboard	With access to the whiteboard, a variety of tools become available such as tools for resources, shapes, text, drawing, whiteboard, activities and more. When meetings are joined through external terminals, such as mobile devices and computers, they can only view the content from the interactive whiteboard. They do not have permission to edit.
	Meeting Invitation	Generates invitations and reminders for meetings.
	Video Layout	Supports multiple types of video layouts including grid view, speaker view, and picture-in-picture view.
	General Settings	The camera resolution and screen sharing resolution can both be adjusted for meetings. You can adjust the resolution up to 1080p by upgrading the activation code permission.
Interactive and Collaborative Whiteboard	Resource Tools	Various media can be inserted, such as templates, local images and local links, and images, videos and links from the Internet. More resources can also be added and edited through the interactive whiteboard.
	Shape Tools	A variety of shapes are available, offering flexibility to edit their color, border, transparency, and other characteristics according to your preferences.
	Text Tools	For fonts, you can adjust the style, size, text color, background color and text alignment.
	Painting Tools	Both a pen and highlighter are available for selection. You can freely modify the color and thickness of the stroke and set the drawing method.
	Whiteboard Tools	Content can be searched for on the interactive whiteboard. You can also insert editable flowcharts and mind maps. Resources can also be inserted, and multiple users can edit the content at the same time.
	Activity Tools	Meeting outlines can be edited on the interactive whiteboard. You can also access practical meeting tools such as timers.
	AI Tools	Features an AI assistant that can generate images and documents, answer questions, translate text to different languages, generate codes, and more.
